# "I do not wish women to have power over men, but over themselves." 

Mary Wollstonecraft,

English writer and
philosopher, 1792

## foreword

n 1995, a group of women leaders, concerned about the status of women and their children in the state and across the country, came together to create the Arizona Foundation for Women (AFW). From that beginning, AFW has worked tirelessly to better the lives of women and children by promoting philanthropy by and for women, and educating policymakers and the public about the needs of women and their families.

Our research has always been the guide for our philanthropic investments and advocacy priorities. This report, our third, continues a proud tradition in our effort to understand the evolving needs of women and girls in Arizona.

Over the last two decades, AFW has refined and focused its work. Over time, we recognize the same barriers to success surface over and over. So, just as we utilize three means to accomplish our goals (research, grant-making and
advocacy), we also focus on three areas of need: Safety, Health and Economic empowerment. We believe SHE Counts! ${ }^{\oplus}$

As we have noted in our two prior reports, status of women is connected to society's overall success. For example, a woman who completes her education and plans her family will be better able to support that family. Women with wage-earning capacity and attachment to the labor force are better equipped to leave abusive relationships if necessary. Children in stable, nonviolent homes arrive at school ready to learn and have fewer barriers to successful, selfsufficient adulthood. When women do well, society as a whole thrives.

With this 2016 report, we seek to catalyze social change. The issues we spotlight, the innovative programs we fund, and the policies we influence become triggers for long-term positive change. We believe women and their families
have the right to live free from fear in a just society. This report is the roadmap to achieving such a world.

The AFW is one of over 100 women's funds and foundations across the globe. We are part of a powerful network and strive to be a key resource for Arizona. We appreciate the support of our fellow community leaders as we work for positive change. We hope that this report provides the inspiration for even more to join us.

Sincerely,

Jodi R. Liggett,
Board Member, AFW

Interim Executive Director, AFW

## who is SHE?

n 2010, the AFW published "Arizona Women: A Status Update," which offered a databased snapshot of Arizona women's standing in many key areas. While progress has been made in certain areas since then, challenges remain. Arizona women often lag behind Arizona men in important areas, and behind women in other states.

So who exactly is the Arizona woman and how does she fare in the state and nationally? Here's a look:

The safety of women is critical for their physical and mental health, their ability to care for their children and maintain employment. The fight against domestic violence, a widespread and underreported crime, has been hampered by a reduction in funding for shelter and legal advocates in Arizona and across the country.

Non-Hispanic White (NHW) women in Arizona and the U.S. remain in the majority. But not for long. The demographic changes are coming faster in Arizona than in most other states. A clear indication of this is the fact that the median age for NHW women is 48.2 , while the median age for Latinas is 27.8.

While Arizona ranks No. 5 nationally in pay equity with men, Arizona women still only earn 84 cents for every dollar a NHW man earns. Women of color fare worse.

Despite the gains of the Affordable Care Act (ACA), 15\% of Arizona women are uninsured, ranking it 10th worst in the nation. A higher percentage of women in Arizona (22\%) than in the nation (17\%) lack a personal health care provider.

Slightly more women in Arizona are unemployed than in the
U.S. Arizona women hold a smaller share of STEM (Science, Technology, Engineering and Math) positions (27.1\%), slightly less than the national average of 28.8\%.

Only $13.6 \%$ of Arizona women age 25 and older have a high school diploma and only $26.2 \%$ of this same population have at least a bachelor's degree or higher. High school graduation rates are improving for Arizona's young women, and the state leads the nation in number of women enrolled in postsecondary education.

Single mothers with children make up a quarter of the family
households in Arizona, close to the national percentage. For an Arizona single mother of two, her median wage is just 29\% above the Federal Poverty Level.

This 2016 update will hopefully provide a platform upon which both Arizona women and men can pursue public discussions and policy-making that will improve the lives of all.

For the purposes of this report, Non-Hispanic Whites are referred to as NHW. Women of color include Black, African-American, Non-
Hispanic Black, Native American, American Indian, Alaskan Native, Latina and Hispanic.

> For more information, statistics and data on the status of Arizona women, see Appendix pages $50-53$.

## safety/social justice

## Victims, Victors, Voters

Personal safety is fundamental for a stable society, but achieving a truly just society for Arizona women requires much more.

Few crimes are more socially destructive than violence against women, or coercion through the threat of violence. Unfortunately, they are also among the most difficult criminal acts to measure.

Sexual and physical assaults against women have long been identified as underreported crimes. They are typically committed behind closed doors, and usually by an individual known to the victim. Victims may be discouraged from seeking justice by feelings of shame and/or guilt, or the need to rely
economically on the abuser. This reluctance may be magnified by a fear of confronting skeptical or unsympathetic people and systems when seeking criminal justice.

Violence against women includes sexual assault, physical violence (including domestic violence), stalking and sex trafficking. None of these categories offer reliable metrics. Looking at intimate partners only, a national survey in 2010 by the U.S. Centers for Disease Control and Prevention (CDC) that measured lifetime prevalence of rape, physical violence and/or stalking by an intimate partner ranked Arizona 22 nd among the states ( 1 is worst), with $36.5 \%$ of the female population reporting themselves victims over their lifetimes. This percentage is still better than the national rate of $35.6 \%$.

Lifetime Prevalence of Rape, Physical Violence, and/or Stalking by an Intimate
Partner by State of Residence, US, 2010
See B1 on page 54

Domestic violence remains a major issue for Arizona's women and children.

Nearly a quarter of women in the nation have experienced severe intimate partner violence (IPV) (e.g., they have been hit with a fist or something hard, beaten, slammed against something, etc.). The health impacts to the victim include being fearful, post traumatic stress disorder (PTSD), injury, chronic pain, headaches, depression, asthma, irritable bowel syndrome, etc. ${ }^{1}$

Women with an annual household income of less than $\$ 50,000$ per year have a significantly higher prevalence of IPV. While IPV affects women of all races, women of color experience IPV at a slightly higher rate than NHW women. The cost of IPV is astounding for medical and mental health care and low productivity (estimated at $\$ 8.3$ billion) and accounts for a loss of 5.6 million days of household productivity each year.

## UNTESTED RAPE KITS

In September 2015, the Maricopa County Attorney's Office was awarded a grant to eliminate the backlog of untested rape kits. The office received a $\$ 1.9$ million grant from the New York County District Attorney's Office to analyze previously untested sexual assault evidence kits. The award is one of the largest amounts granted to 32 jurisdictions in 20 states, and will be used to test an estimated 2,300 rape kits in Maricopa County under an initiative launched by the County Attorney's Office earlier this year in partnership with local law enforcement agencies. ${ }^{2}$

In January 2016, Gov. Doug Ducey formed the Arizona Sexual Assault Evidence Collection Kit Task Force, a bipartisan coalition of victims' advocates, law enforcement officials and policy makers tasked with addressing the injustice of untested rape kits throughout Arizona.

Throughout the countryincluding Arizona-crime labs struggle to keep up with timely testing of the kits. In the past, kits weren't tested for a variety of reasons, particularly in cases where authorities deemed testing unnecessary because the victim knew the assailant and there was no question about the suspect's identity. But the samples are now considered a valuable tool in identifying repeat offenders.

The task force will provide legislative recommendations to ensure every future kit is tested in a timely manner; develop a statewide standard process for testing protocols of the kits; develop a statewide tracking system for the kits; and develop a public education plan to assist sexual assault victims.

## STRANGULATION

Historically, professionals have minimized strangulation due to the lack of visible injuries and lack of medical training. In Maricopa County, forensic nursing staff that
see victims of sexual assault, along with county prosecutors, have proactively created medical testing to prove strangulation.

Aggravated Assault by Strangulation 13-1204.B became law in Arizona as a Class 4 Felony and was added to the Domestic Violence Statute on July 29, 2010. The statute defines strangulation as either intentionally or knowingly impeding the normal breathing or circulation of blood of another person by applying pressure to the throat or neck or by obstructing the nose and mouth either manually or through use of an instrument.

Thirty-eight states have passed statutes in the last 10 years to recognize this oversight, increase awareness, and enhance victim safety and offender accountability. The newly reauthorized Violence Against Women Act of 2013 added felony strangulation and suffocation to the federal law.

million in grant money awarded to the Maricopa

kits. victims of rape, physical violence and/or stalking by an intimate partner over their lifetimes.

## DOMESTIC VIOLENCE

First, the good news. The U.S. Justice Department says reported cases of domestic violence nationally have decreased sharply over the past two decades. The reasons likely include increased public education and advocacy, more assistance for women in avoiding or escaping abusive relationships, the slowly rising socioeconomic status of women, and the overall aging of the population.

Now the bad news. Domestic violence in America remains a widespread and destructive social problem. As noted, it remains difficult to obtain reliable data on its frequency. However, the Arizona Coalition to End Sexual and Domestic Violence reports that 1 in 4 women nationally has experienced domestic violence in her lifetime. For Arizona, that translates to 804,048 women.

Another telling measure is the number of calls to 911 . For many police departments, domestic

# "Arizona needs to empower women to leave their own abusive situations...sometimes it's easier for women in domestic violence situations to talk about it with strangers who might judge you less." 

\author{

- Stacey Ramirez, Arizona resident, mother, and domestic violence survivor
}
violence persists as among the most common violence-related 911 call-if not the most common.

Abusers and victims can be of any gender preference, any racial/ ethnic group and all social levels. The abuse can manifest itself as explosive instances of severe violence or sexual assault, or can fester quietly in the form of an abuser's long-term control over the victim. In either case, the secondary victims often include the children, who witness the violence, as well learn these behaviors, thus perpetuating the cycle.

Nationally, women are killed by intimate partners (husbands,
lovers, ex-husbands, ex-lovers) more often than by any other category of the killer. The Danger Assessment study found women who were threatened or assaulted with a weapon were 20 times more likely than other women to be murdered. Women whose partners threatened them with murder were 15 times more likely than other women to be killed. And when a gun was in the house, an abused woman was six times more likely than other abused women to be killed. ${ }^{3}$

In Arizona in 2015, the Arizona Coalition to End Sexual and Domestic Violence reported 67\% of all domestic violence related fatalities were the result of a firearm.

## SEX TRAFFICKING

In the United Nation's Office on Drugs and Crimes Global Report on Trafficking in Persons, sexual exploitation was noted as by far the most commonly identified form of human trafficking (79\%), followed by forced labor (18\%). This may be the result of statistical bias.

By and large, the exploitation of women tends to be visible, in city centers or along highways. Because it is more frequently reported, sexual exploitation has become the most documented type of trafficking, according to aggregate statistics.

In comparison, other forms of exploitation are underreported: forced or bonded labor; domestic servitude and forced marriage;
organ removal; and the exploitation of children in begging, the sex trade and warfare.

Under the U.S. Trafficking Victims Protection Act (TVPA), sex trafficking involves the use of force, fraud or coercion to induce someone to engage in sexual behavior, unless the victim is a minor. This is a crucial distinction. Girls under 18 engaged in commercial sex (the exchange of any item of value for a sex act) have often been viewed-and arrested-as prostitutes, while they should be treated as victims.

Recent estimates by the U.S. Agency for International Development put the number of people enslaved in sex or labor exploitation anywhere from 12 to 27 million worldwide.

Many people think of trafficking as a problem that only happens in developing countries. However, the Federal Bureau of Investigation estimates that 293,000 American children are at risk for being trafficked each year, including many children in Arizona's vulnerable populations.

## Social Justice

## EARNINGS DISPARITY

If "social justice" must include equal pay for equal work, Arizona is not there yet. Compared with women in most other states, however, those in Arizona face smaller disparities between their wages and wages paid to men for the same or similar work.

## Arizona's wage gap ranks 8th in the nation, with women making 84 cents to each men's $\$ 1$. The national wage-gap average for women is 78.6 cents per men's $\$ 1$.

Arizona ranks 8th in the nation in this wage gap, with women making 84 cents to each $\$ 1$ made by a man. The national wage-gap average for women is 78.6 cents per $\$ 1$ made by a man. But these figures-in Arizona and elsewhere-refer to wages earned by NHW men. Using NHW men's earnings as a baseline, the wage gap for women of color is even greater (see chart at left). These gaps have changed little in at least a decade.

## CHILD SUPPORT

Few would deny that "social justice" demands financial support of children from both parents, especially if one parent is raising the children alone. Unfortunately,

Arizona is tied for at 7th for the lowest number of female heads of households receiving child support (23\%). The U.S. average is $29 \%$ or alternatively stated, $71 \%$ of women heads of households in the country did not receive child support.

In Arizona, the rate is even higher at $77 \%$. It is during and immediately after tough economic times that the Child Support Program's mission of getting regular payments to families becomes even more difficult, and at the same time, more critical. The Arizona Attorney General's Office works with the Department of Economic Security to enforce child-support laws.

Ranking States with Women Heads of Households Receiving Child Support, U.S., 2013
See B3 on page 54

## PUBLIC ASSISTANCE

Just over half of single mothers in Arizona who are heads of households are enrolled in public assistance programs, including Supplemental Security Income (SSI), Cash Assistance, and SNAP (Supplemental Nutrition Assistance Program) benefits (food stamps). The median income of single-mother households is roughly $\$ 26,000$ (men-only heads of households' median income averages about $\$ 20,000$ more). ${ }^{4}$

## AFFORDABLE CHILD CARE

Work and self-sufficiency are key components to escaping poverty, and a key support to working women is child care.

Without it, many parents cannot obtain the education, training and compensation offered by employers, thus making it difficult for them to reach their full potential as wage earners.

- Child care is one of the biggest expenses families face. Infant care in Arizona costs just \$469 (4.7\%) less than in-state tuition for a four-year public college or 13.3\% less than average rent.
- Child care is unaffordable for families, taking up $17.6 \%$ of a typical family's income. Families with two or more children face an even larger burden.
- Child care is out of reach for lowwage workers. A woman making minimum wage in Arizona would need to work full time for 29 weeks, or from January to July, just to pay for child care for one infant. ${ }^{5}$

According to the U.S. Department of Health and Human Services (HHS), child care is affordable if it costs no more than $10 \%$ of a family's income. If Arizona were to enact this standard, the share of post-child care median income freed up by such capping would be $9.3 \%$. Such a change would increase Arizona's economy by $\$ 3.85$ billion. ${ }^{6}$

## CRIMINAL JUSTICE SYSTEM

Arizona is nationally known for its emphasis on incarceration as punishment for men offenders, with an imprisonment rate regularly ranking among the top 10 states. Arizona's criminal justice officials are taking much the same approach to women offenders,
who make up about $9 \%$ of the total inmate population. ${ }^{7}$

Arizona's imprisonment rate for women is 5th highest among the states, and it ranks 9th in the nation for the largest percentage growth of women in the prison system.

It's important to remember that the "punishment" a prison inmate experiences goes beyond her deprivation of liberty. Ex-inmates (some $95 \%$ of people sent to prison eventually get out) face a number of barriers to putting their lives back together, including restrictions on employment and housing. As women are usually the primary caregivers, they must also cope with the needs of their families, which often include children already traumatized by other events.

> Arizona's imprisonment rate for women is 5 th highest among the states, and it ranks 9th in the nation for the largest percentage growth of women in the prison system.

See B7 on page 57

## POLITICS

Safety means more than just the absence of violence or threats. It means an environment in which a woman can thrive and reach her potential, free of prejudice, gender stereotyping and other barriers to advancement. It means progress

towards true equality. It means an environment in which women's votes and political voices are heard and heeded.

Arizona has made much progress towards that goal...at least by the numbers. The first number is 1912 , when the state was one of the earliest to approve women's suffrage. The ballot proposition-voted on strictly by men, of course-passed in Arizona's first election as a state, well ahead of the 1920 amendment to the U.S. Constitution.

Another number is four, which equals Arizona's nation-leading total of women governors: Rose Mofford, Jane Dee Hull, Janet Napolitano and Jan Brewer.

The numbers continue. Since the 1970s, Arizona has consistently ranked among the top 10 states for the percentage of women serving in the Arizona Legislature. For the past 11 years, the legislature has always been at least $30 \%$ women.

In 2016, Arizona ranked 3rd in the nation in the percentage of women state legislators, with $35.6 \%$. Women currently occupy one-third of Arizona's seats in the U.S. House of Representatives, though both senators are men. This places Arizona 8th in the nation, alongside New Mexico, for the proportion of women representatives. Eighteen states sent no women to the House and 33 states sent no women to the Senate.

These numbers are welcome and they also raise a question: Has the presence of women in power helped bolster or even enhance the status of women in Arizona? No definitive answer is possible, if only because we can't know what Arizona politics would have been without them. Nor do women officials limit their attention to "women's issues."

But for those dissatisfied with their political representationmen or women-voting remains the simplest, easiest and most

Percentage of Women in House of
Representatives and U.S. Senate, 2015
See B9 on page 57

effective way of enacting change in public policy. It's also among the most neglected. Percentages of voter registration and turnout remain low in both Arizona and

Top 10 State Legislatures with

## Percentage of Women Voting

 and Registration, AZ, 2014See B10 on page 59

- Total Registered [55.6\%]
Citizen Registered [63.1\%]

> Since the 1970s, Arizona has consistently ranked among the top 10 states for the percentage of women serving in the Arizona Legislature.
the nation. $\ln 2014,61.2 \%$ of the nation's eligible women voters registered, as did $55.6 \%$ of eligible Arizona women. But registering is one thing; actually casting a vote is another. In that same election, only $39.6 \%$ of eligible American women voted, and even fewer (37.4\%) of Arizona women.

The issues of voter registration and turnout are especially timely ones for Arizonans because of the demographic changes noted herein (the gradual, but unstoppable shift from an aging NHW majority to a younger Latino majority). This has obvious implications at the
ballot box, as most Latinos are historically more likely to vote Democratic and to support public assistance for the needy.

But their impact will not be soon or sudden. Latinos currently make up only about $25 \%$ of Arizona's voting-age population. In addition, younger and lower-income individuals tend to register and vote less often than older, wealthier ones. Still, few observers of any political persuasion deny that change is coming. Arizona women must ensure that they are a part of it.

## health

## Strong Women, Strong State

Arizona women of every age and background face a range of health issues, from teen births and diabetes to substance abuse and suicide-problems that are especially acute for minority women. The health challenges Arizona women face are compounded by the difficulties that they encounter accessing physical and mental health care.

## PHYSICAL HEALTH

Arizona's women are tied for 20th highest percentage in the nation with $18 \%$ of all women reporting a fair or poor state of health. The

## Percentage of Adult Women Reporting Fair or Poor Health Status, by Race/Ethnicity, AZ, 2012-2014

See C1 on page 60

national average is $19 \%$, however NHW women in Arizona fare better with $15 \%$. Women of color in the state exceed NHW percentages by at least $10 \%$.

## Percentage of Women in Substance Abuse <br> Treatment Programs, United States, 2010

See C3 on page 61

## MENTAL HEALTH / <br> SUBSTANCE ABUSE

Overall, Arizona is tied in the nation at $39 \%$ for women reporting poor mental health status. NHW women have a slightly lower percentage than the national average. Both Black women and Latinas exceed the national average and that of NHW women in the state. Of additional concern, the researchers at the National Institute of Mental Health (NIMH) are studying the special challenges of serious mental illness during pregnancy and the postpartum period. ${ }^{8}$

Substance abuse disorder is considered a mental health issue that correlates with poverty and selfmedication, and is a major challenge for many women in our state. In Arizona, $39.4 \%$ of all admissions to

treatment programs are women, compared to a national average of $34.7 \%$. Arizona is 7 th in the nation in the percentage of women admitted to substance abuse programs as a percentage of all admissions.

The National Council on Alcoholism and Substance Abuse calls addiction "a primary, chronic disease with genetic, psychosocial, and environmental factors influencing the disorder's development and manifestations."

Finding help can constitute another challenge. A 2015 report from the Pew Charitable Trusts concludes the number of people with insurance coverage for alcohol and drug abuse ${ }^{9}$ disorders is about to explode at a time when there's already a severe shortage of trained behavioral health professionals in many states. Nationally, an average combined total of 32 psychiatrists, psychologists, counselors and social workers are available to treat every

1,000 people with substance use disorders. For Arizona, the number is 20 , which ties the state for 6th from the bottom. There is a range from a high of 70 to a low of 11 in state rankings.

Sometimes, mental illness can lead to the ultimate act. Suicide remains a problem both nationally and in Arizona. Nationally, about 6 out of 100,000 women's deaths are due to suicide. The suicide rate for Arizona women is higher at approximately 9 women per 100,000, ranking Arizona 7th worst in the nation. The main risk
factors include depression, other mental disorders or substance use disorder, a prior suicide attempt, a family history of mental illness ${ }^{10}$ and a family history of suicide.

## PERSONAL DOCTOR

Modern medicine increasingly emphasizes regular checkups and other preventative measures, but nearly 1 of every 4 Arizona women (22\%) report they lack a personal doctor or healthcare provider. This metric ties Arizona for 6th worst among all the states for the percentage of women having no personal doctor.

> Arizona's ranking in the nation for suicide with a rate of approximately 9 women per 100,000. Sее с4 оп раge 62

Percentage of Women with
Health Insurance by Race/
Ethnicity, AZ, 2013
See C7 on page 64

The rates rise even higher for Native American women, but there is not enough data nationwide to confirm their ranking. Minority women are more likely to be excluded from preventative care and must often seek help via expensive emergency services.

## HEALTH INSURANCE

In 2014, the Affordable Care Act (ACA) without question improved access to health insurance in the nation and the state, allowing women access to preventative, primary and specialty care. In 2016, we are in the midst of implementation, and time lags due to reporting information may not present the most current state of health insurance access. At the same time, the flaws of the ACA for certain subgroups have become apparent. A report by the Guttmacher Institute found that American-born Latinas were twice as likely as their NHW counterparts to be uninsured. These rates doubled again for foreign-born Latinas. ${ }^{11}$

Millions of people in the U.S. go without health insurance each year. Because Medicare insures nearly all of the elderly, most uninsured Americans are nonelderly (under age 65). Arizona ties for 9 th place in the percentage of women ages 19 to 64 who are uninsured ( 1 being the worst) at 15\%. Women in Arizona drop to 43rd place when looking at the percentage of women who have insurance through their employer, which is the most common source of all health insurance at $54 \%$.

Nationally, racial disparities in insurance coverage exist in all states, and women of color are less likely to be covered than their NHW sisters.

Although the ACA has enrolled more than 20 million Americans, ${ }^{12}$ recent insurance pullouts raise questions about the viability of the ACA without a legislative fix; such action is unlikely in the current Congress.

## FAMILY PLANNING

Women and couples have the means to control whether and when to have children through contraception. The Guttmacher Institute has reported that nearly half of pregnancies in the U.S.almost 3 million each year-are unintended, and these pregnancies are highly concentrated among poor and low-income women.

In 2013, 458,900 women in Arizona were in need of publiclysupported contraceptive services and supplies. Large portions of these women are young ( $20 \%$ are under age 20), women of color (66\%), low-income (80\% have a family income level below 250\% of the Federal Poverty Level) and/ or uninsured (30\%). Births from unintended pregnancies present a substantial burden on the lives of many women and families.

NHW [13\%]
Asian/Pacific Islander [14\%]
American Indian [36\%]
Black [21\%]
Latina [23\%]

## TEEN BIRTH RATE

Arizona ranks 12th highest in the nation in birth rates for ages 15 to 19 , at 29.9 teen births per 1,000 teens. Since 2007, both the teen birth rate and abortion rate have been declining nationwide. American Indian/Alaskan Native teens had the highest teen birth rates in 2013, while Latinas had the highest rate of abortions in teens age 15 to 19 .

Just $38 \%$ of teen girls who have a child before age 18 get a high school diploma. ${ }^{13}$ Many teen mothers drop out of school, which often presents
further negative consequences Adolescents and young adults without high school degrees have higher incarceration rates, higher unemployment rates and lower earnings. ${ }^{14}$

## PRENATAL CARE

A lack of adequate prenatal care can have lasting negative effects on both mothers and children. Teen mothers are nearly twice as likely to forgo prenatal care in the first trimester compared to older mothers. ${ }^{15}$

## Since 2007 , both the teen birth rate and abortion rate have been declining nationwide.

## ABORTION

Arizona ranks 25th in abortion rates for 15 - to 44 -year-olds (at 10 per 1,000 women). Most of the women are over age 20. The majority of abortions are completed before 12 weeks gestation. Across the U.S., abortion rates have declined by $13 \%$ from 2008 to 2011. According to a report by the Guttmacher Institute, this shift has resulted in the lowest abortion rates since 1973. There has also been a demonstrable decline in birth rates throughout the U.S. ${ }^{16}$

Why have abortion rates declined? One generally accepted factor is the lingering impact of the Great Recession in 2008; couples tend to put off having children (or more children) during tough economic times. But that's where agreement on this controversial political issue ceases. Some argue that the national decline in abortions is due to the growing access to, use of and efficacy of contraceptives. On the other hand, critics of such

## Rate of Legal Abortions [per 1,000]

Ages 15-44, U.S., 2012
See C9 on page 63

arguments credit the decline to the tightening of laws that limit women's access to abortion. So while the cause is intensely debated, both sides acknowledge that abortion rates are indeed down. ${ }^{17}$

48
Ranking in overall incidents of breast cancer. Arizona has a low incidence of breast cancer-we are lower than the national average, even among minority groups.

See C12 on page 66

## Cancer Rates

## BREAST CANCER INCIDENCE AND DEATH

Arizona has a low incidence of breast cancer-we are lower than the national average, even among minority groups. The state ranks 48th in overall deaths from breast cancer, with the death rates for Black women being significantly higher than those for NHW women.

Latina women in Arizona contract and die from breast cancer at a lower rate than NHW or Black women. But while women in these latter two categories contract breast cancer at about the same rate, Black women die from it at a higher rate.

## CERVICAL CANCER

As it is throughout the U.S., cervical cancer remains a major health concern in Arizona, with Latinas
experiencing much higher rates of incidence and death. Still, there is some good news. The CDC reports the incidence and mortality rates of cervical cancer among all women declined significantly from 1999 to 2013. The sharpest drops have occurred among Latinas and Blacks, but for Alaska Native/American Indian women, incidence and mortality rates have remained the same. ${ }^{18}$

Ten States with Highest Cervical Cancer Rates [per 100,000] U.S. and AZ, 2012
See C14 on page 67

## Breast Cancer Death Rates [per 100,000], U.S. and AZ, 2012 <br> See C13 on page 67

Arizona women are tied for 40th lowest among the states in obesity and overweight rankings. Yet that still means that most adult women living in Arizona (about 54\%) are considered obese or overweight.

A study published in the Journal of Women's Health suggests that methods of cervical cancer detection could be improved by using alternatives to the traditional Pap smear such as HPV testing and HPV vaccinations for women. ${ }^{19}$

## Other Health Issues

FEMALE OBESITY
The problem of obesity in America is so extensive that even states that rank relatively well on this measure have large populations of overweight residents. Arizona is a good example: Arizona women are tied for 40th lowest among the states in obesity and overweight
rankings. Yet that still means that most adult female women in Arizona (about 54\%) are considered obese or overweight.

## DIABETES

In Arizona, as in many other states, roughly $9 \%$ of adult women report having been diagnosed with diabetes. An additional 2\% report it was pregnancy-related, while another $2 \%$ report they have been diagnosed as pre-diabetic or borderline. This is truly a national problem.

According to the CDC, the number of adults newly diagnosed with diabetes in the U.S. has nearly tripled since 1980.20 The health complications for diabetes can be even more severe for women with gestational or pre-gestational diabetes. For diabetic women, births are almost always considered "high risk," as pregnancy-related risks are elevated, including birth defects and infant mortality.

## economic empowerment /education

## Constructing the Future

## EDUCATION

Rising educational opportunities for Arizona women (see Economic Empowerment), from preschool to graduate school, are among the most important drivers of social change for today's generation and those to come.

College Success Arizona's Doubling Arizona's Economic Growth Report, 2016 affirms raising Arizona's education attainment across all levels will be key to economic competitiveness, and to individual's social and fiscal gains.

Education ideally starts at birth. A large body of research confirms that early childhood interventions result

Women and Men Educational Attainment, AZ, 2011-2013
See D1 on page 68

in improved school performance later on, higher educational attainment, higher lifetime incomes for the children, and overall improvements for the state in terms of a better educated, more stable workforce.

## Children In Poverty by Race/Ethnicity, AZ, 2014

See D2 on page 69

Top Ten States with Children Living in Food Insecure Households, U.S., 2013
See D3 on page 70

In Arizona, $6.2 \%$ of women age 25 and older have less than a ninthgrade education. The nation's average is $5.7 \%$. Of Arizona women age 25 and older, $7.4 \%$ of them do not have a high school diploma. This ties the state with the national average.

Men and women's levels are very close in Arizona. The trend in Arizona and the nation is for women to increasingly outpace men in virtually all areas of educational attainment, especially in most four-year college and professional/ graduate school degrees.

## WHO ARE ARIZONA'S CHILDREN?

Arizona children are relatively equal in number in regards to gender. The percentage of Arizona's children under 18 living at poverty ranks the state 3 rd worst in the nation at $28 \%$, exceeding the national average of $22 \%$.

Of Latino children under the age of $18,47 \%$ live in poverty. The national average is $32 \%$. Similarly, Black children under the age of 18 live in
poverty at a rate of $45 \%$, compared to a national average of $38 \%$. The NHW rate of poverty for Arizona's children under 18 is much lower ( $17 \%$ ) than that of Latinos or Blacks.

In 2013, $25 \%$ of Arizona children experienced food insecurity at some point in the year, tying the state for 8th worst in the nation. Children who are hungry often cannot focus to learn.

In 2014, 17\% of children in Arizona were being raised in households without a high school graduate, compared to a national average of $14 \%{ }^{21}$ Scholars and educators agree that a home environment that values academics provides a significant boost to a child's educational performance. Poorly educated parents are often less able to help their children perform academically.

## EARLY CHILDHOOD EDUCATION

High-quality pre-kindergarten programs for 3- and 4-year-olds can improve school readiness, with the greatest gains accruing to the
highest-risk children. The public funding of early childhood education has been a contested political issue in Arizona over the last decade. At $65 \%$, Arizona ranks 3rd worst in the nation for the number of 3- and 4-year-old children not attending preschool. This is significantly above the national average of $53 \%$.

## ELEMENTARY AND MIDDLE SCHOOL

During these years, children master the basics (reading and math) and learn to function in a much broader world outside their homes. Academic and social skills are needed for success in school and life. Math and reading scores have improved very little in recent decades. ${ }^{22}$ Gaps by race have narrowed only modestly, while gaps by income have widened dramatically.

In Arizona, $83 \%$ of children who were eligible for free and reduced lunch-a common marker of poverty-scored below reading proficiency standards, tying the state for 3rd worst in the nation. The national percentage is $79 \%$.

Young Children Not In Preschool, Ages 3-4, U.S., 2013
See D4 on page 70

of Arizona children who were eligible for free/reduced lunch-a common marker of poverty-scored below reading standards.
See $D 5$ on page 71

Highest/Lowest Eighth Grade Math Below Proficient

Ethnicity, AZ, 2015
See D6 on page 72

- NHW [60\%]

Latinos [82\%]
Asian/Pacific Islander [53\%]
Native American [85\%]

For Arizona fourth graders (both sexes) not eligible for free and reduced lunch in the state and nation, the percentage that scored below reading proficiency is much less (48\%). Arizona fourth-grade students that scored below the proficiency in reading exceeded all national averages, except for Blacks for whom insufficient data was reported.

In eighth-grade math skills, the numbers are no better. In Arizona, $68 \%$ of eighth-grade students were below proficiency in math, tying the state with the national average. Blacks and Latinos experience significantly higher rates of failure than NHW. Arizona ranks 3rd worst in the nation when measuring these scores by NHW. (see D8 on page 74)

## HIGH SCHOOL GRADUATION RATE

According to the National Center for Education Statistics, Arizona posted an $81 \%$ four-year graduation rate for young women in public high schools in 2012, its ranking tied for 38th among the states. The U.S. average for young women was $85 \%$.

Arizona students of color (both sexes) graduate at a lower rate: Native Americans at 67\%, below the national average of $68 \%$; Blacks at $73 \%$, compared to a national average of $68 \%$; and Latinos at $72 \%$, compared to a national average of $76 \%$. Asian/Pacific Islander students (both sexes) graduate at the highest rate of all Arizona ethnic groups (89\%), though lower than the national average (93\%).
> "...it used to be that a high-school diploma was just beautiful. But now, as a woman, you need to have an advanced degree. Even a bachelor's or associate's degree don't seem to be enough."

Some students take more than four years to graduate high school. Pregnancy and family responsibilities significantly influence a girl's ability to stay in school. Poor attendance (due to bullying, sexual harassment, "ditching school") and poor academics (lack of understanding and completing the work) ${ }^{23}$ also contribute to a prolonged high school career.

## DROPOUT RATES

Dropping out is a process and does not occur overnight. The process often starts prior to a child entering
into the school system. Poor academic achievement as early as elementary school is predicator of dropping out of school.

Many times, not all risk factors apply to all students. ${ }^{24}$ However, research has consistently indicated the following risk factors as variables that lead to a student dropping out of school:

- Poor academic performance
- Work/family economic needs
- Lack of a supportive adult
- Not enough individualized attention

Fernanda Munoz, a single mother of two children ages 5 and 13 , is pursuing her degree in nursing. She describes the major challenge specifically facing women in Arizona today as ". . competing with men in the work field and raising children on our own."

Children of dropouts are more likely themselves to drop out. In addition, girls who fail to graduate tend to have higher rates of unemployment, make significantly lower wages, and are more likely to need to rely on public support programs to provide for their families. ${ }^{25}$

The economic impact of failing to graduate is associated with high levels of poverty, more so for women than men. Nationally, some $32 \%$ of women with less than a high school degree live in poverty, compared to $24 \%$ of men. ${ }^{26}$ Arizona ranks lower than the national average with $35.7 \%$ of women lacking a high school diploma living in poverty, compared to $29.1 \%$ of men. ${ }^{27}$ This reflects the fact that Arizona men have higher average incomes than women throughout the entire income rankings.

## POSTSECONDARY <br> ENROLLMENT

Arizona is tied for No. 1 for total fall enrollment in degree-granting postsecondary institutions. This includes full-time and part-time students. The percentage of women enrolled is $61 \%$.

Studies show most students at fouryear institutions graduate within six years. ${ }^{28}$ The National Student Clearing House Research Center at Indiana University reported last year on a group of students who started their college degrees in 2009. Their major findings and implications included:

- An acceleration of the decline of overall completion rates, although women completed at a higher percentage (56.3\%) than men (49.6\%).
- Declines in completion rates were across all ages and enrollment intensities. Completion rates are higher for women (63.2\%) than men (54.2\%) who start their degree under age 20.

Total Women's Full-Time Enrollment in Degree-Granting
Postsecondary Institutions, U.S, 2013
See $D 10$ on page 76

- Completion rates declined in both public and private institutions to approximately $63 \%$.
- Completion rates for students who started at two-year public
institutions continued to decline (only $38 \%$ ), including completions at four-year institutions to $15 \%$. A greater number of women (41.5\%) completed such degrees than men (35.7\%). ${ }^{29}$

Arizona's ranking for number of women STEM workers to the share of all STEM workers in a state.

## FIRST-GENERATION COLLEGE STUDENTS

The results for first-generation college students show they are at a distinct disadvantage to obtain a post-secondary degree. Those who do enroll, have difficulty remaining enrolled and attaining a degree.

For all the reasons cited in the chart below, first-generation college students were less likely to earn a bachelor's degree than their peers whose parents had earned bachelor's or advanced degrees. However, when the outcome measure was broadened to include persistence (i.e., the likelihood of earning any postsecondary credential or still being enrolled), no difference between first-generation students and their peers whose parents attended college was detected after controlling for related variables.

## STEM DEGREES

In recent years, the lack of women in the STEM professions (science, engineering, technology and math) has emerged as an increasing topic of concern. While women make up more than half of the national workforce and more than $56 \%$ of college students, the White House reports that more than half a million STEM jobs remain unfilled.

As of 2013, Arizona's STEM field was comprised of $27 \%$ women, ranking it 37th when comparing women STEM workers to the share of all STEM workers in a state. About $4.8 \%$ of working Arizona women are in STEM careers, which places it 16th in the nation. Nationally, women employed in STEM jobs earn $33 \%$ more than their female peers in other jobs, and while this shrinks the wage earnings gap
for women, it does not make it disappear over time. ${ }^{30}$

Why are there so few women STEM workers? Advocates and researchers say it may be due to implicit biases, ${ }^{31}$ underrepresentation of women in STEM educational majors and jobs, gender stereotypes, or unconscious assumptions that work against welcoming more women into these careers. Work is being done to depict STEM in a more inspiring light in the media and debunking STEM stigmas and misconceptions. ${ }^{32}$

Given the high-quality, well-paying jobs in the fields of STEM, there is great opportunity for growth in STEM in support of Arizona's and America's competitiveness, innovation and jobs of the future.

## Economic Empowerment

## WHAT IS POVERTY?

The Federal Poverty Level (FPL) is a measure of income level issued annually by the U.S. Department of Health and Human Services. This is an important national statistic, as it is used to determine eligibility for certain programs and benefits. FPL amounts issued by the federal government for 2016 to determine eligibility for Medicaid and some other programs are:

- \$11,880 for individuals
- $\$ 16,020$ for a family of 2
- $\$ 20,160$ for a family of 3
- $\$ 24,300$ for a family of $4^{33}$

Critics of the FPL claim it underestimates the true level of poverty in the country. They say this is because, among other things, it's based on a mix of goods and services dating from the 1960 s (although updated for inflation) and thus, does not reflect modern resources and expenses; it does not vary by geographic differences in cost of living; and its definition of measurement units ("family") as persons related by blood or marriage does not reflect the mixed nature of many modern households.

## ADULT POVERTY

Year after year, data show that men typically earn more than women, and women are more likely to be poor. Single mothers, women of color, and elderly women living alone are at particularly high risk of poverty.

In Arizona, a little over 16.5\% of women live in poverty. Only $11.6 \%$ of NHW women live in poverty. Women of color in Arizona are twice as likely to live in poverty (Blacks at $22.8 \%$ and Latinas at 24.8\%). Native Americans are three times as likely to live in poverty at 33.5\%. All Arizona percentages equal or exceed the national averages.

## EARNINGS AND WAGES

In 2014, when compared with other states, Arizona ranked 23rd highest for full-time women workers' median earnings at $\$ 36,916$. The median earnings for men were \$43,945.

In 2016, Arizona's $\$ 8.05$ minimum hourly wage is nearly $\$ 1$ higher than the federal minimum of $\$ 7.25$ an hour. Only 29 states and Washington D.C. have minimum wages above the federal minimum wage. Twenty (20) states have minimum wages equal to or below Arizona (this excludes a few states with two-tiered wage structures). This means an Arizona single mother of two working a minimum wage job would earn an annual income of $\$ 16,744$, which is $17 \%$ lower than the federal poverty level of $\$ 20,160$.

Poverty is often associated with virtually all social ills. A significant proportion of the poor are actually employed and known as the "working poor." Largely because they are earning such low wages, the working poor face numerous obstacles that make it difficult for many of them to find and keep a full-time job that pays reasonable
wages, allows them to save money, and maintain a sense of self-worth.

The living wage is generally considered to be the hourly rate an individual must earn to support their family (if they are the sole provider and are working full-time). The state minimum wage is the same for all individuals, regardless of how many dependents they have.

The poverty wage is typically quoted as gross annual income, which has been converted to an hourly wage for comparison's sake. This is the official threshold for eligibility for certain federal assistance programs. So for that same single mother with two children referenced above, the discrepancy between living wages and poverty wages is significant (see chart at right).

> A significant proportion of the poor are actually employed and known as the "working poor."
> This is largely because they are earning such low wages.

Living vs. Poverty Hourly Wages for
Single Women/Parents, AZ, 2016
See D13 on page 80

## UNEMPLOYMENT RATES

Unemployment rates tend to change regularly. The average unemployment rate for women in

## Women's Unemployment as Part of the Civilian Population by Race/Ethnicity, AZ, 2014

 See D15 on page 80
## NHW [6.3\%]

- Black [6.5\%]
- Asian/Pacific Islander [4.6\%]
- Latina [8.1\%]

## Women's Unemployment as Part of

the Civilian Population, U.S., 2014
See D16 on page 78

Arizona in 2015 was $5.7 \%$, slightly above the nation's average. Black women in Arizona had a rate of 8.2\% unemployment, compared to the national rate of $8.9 \%$. The rate for Latinas in the state was $8.2 \%$, while the national average was $7.1 \%$. NHW women experience unemployment at 5.5\%.

Rates for women in Arizona were highest amongst those ages 16 to 24 and over 65 . Those ages 25 to 64 ranged from $4.6 \%$ to $5.6 \%$. Annual average unemployment rates for Arizona women have decreased from $7.1 \%$ in 2014 to $5.7 \%$ in 2015, ranking Arizona 13th best in the nation.

Workforce participation includes those employed and those unemployed and actively seeking jobs in civilian noninstitutional positions.

## OCCUPATIONAL CATEGORIES

Women in Arizona work in virtually all occupational categories. They currently rank 18th in the nation for women in
the management, business and financial sector (supervisory positions across all industries). The largest sector occupied by working women in Arizona is the working professional and related category (scientists, healthcare workers, educators and lawyers); almost a quarter of all women workers in the state occupy these jobs.

In 2013, Arizona Latinas ranked lower than any other ethnic group at $24.4 \%$ for the professional and related group. ${ }^{34}$ Arizona ranks 43rd in the nation in this metric, meaning there are relatively fewer Arizona women in professional and related careers here than in other states.

Roughly $23 \%$ of Arizona women work in the service industry (cooks, beauticians, cashiers, retail clerks, travel attendants and childcare workers), while another $21 \%$ work in office and administrative support (secretaries, general office clerks and bank tellers).

## OCCUPATION AND EARNINGS

Men and women were fairly equally represented among management, business, science and arts occupations, but large differences in women's pay and men's pay occurred. For example, there were more men than women in management, business and financial occupations ( $56 \%$ to $44 \%$ ), but men in this category earned a median of $\$ 65,616$ while women earned a median of $\$ 48,179$.

Men far outnumber and significantly out-earn women in computer, engineering, science, math and architectural occupations. Women far outnumber men in education, community and social service
"The one change that would most benefit Arizona women today would be to ensure all women had equal opportunity and pay as men in Arizona."
occupations, but on average are still paid less. Service occupations are split almost equally between men and women, but men earn more. One notable area of disparity in earnings is the legal occupations. Men comprise $46 \%$ of this workforce, while women comprise $54 \%$. Yet men's median earnings are roughly $\$ 97,000$, while women's are roughly $\$ 52,000$.

On the other hand, the category displaying the smallest gender wage gap in Arizona is healthcare support occupations, a field typically dominated by women. The median earning here is roughly $\$ 24,000$ for both men and women. The other occupational category where men and women earn equivalent amounts is office and administrative support occupations. Here, $71 \%$ of the total workforce is women; both they and their male colleagues earn a median salary of $\$ 29,000$.

## A Changing <br> Workforce <br> REPRESENTATION IN SELECT OCCUPATIONS

Although women are getting paid less than men for similar work, the last decennial census showed how women are increasingly entering traditional male occupations. ${ }^{35}$

## BUSINESS <br> OWNERSHIP

Businesses owned by women have experienced substantial growth in recent years. ${ }^{36}$ They also play a role in nearly every industry sector.

According to the Census Bureau's Survey of Business Owners, Arizona ranked 12th highest (36.5\%) in the percentage of all state firms owned by women in 2012 (the most recent numbers available). The nation's average was $35.8 \%$.

The vast majority of womenowned businesses in Arizona and the nation were self-employed individuals. In Arizona, only $10.4 \%$ had paid employees. The percentage of women-owned businesses in Arizona was second highest in the nation (after Nevada) in the real estate sector.

The growth of women-owned businesses outpaced total business growth in Arizona and nationally between 2007 and 2012, and also experienced faster revenue growth over this time period.
> \$44,074 Wage gap between Arizona men and women in legal occupations.

See D18 on page 81

Note: The estimates are based on the 2010 Census and reflect changes to the April 1, 2010 population due to the Count Question Resolution program and geographic program revisions. Median age is calculated based on single year of age. Hispanic origin is considered an ethnicity, not a race. Hispanics may be of any race. Responses of "Some Othe Race" from the 2010 Census are modified. This results in differences between the population for specific race categories shown for the 2010 Census population in this table versus those in the original 2010 Census data. For more information, see http://www.census.gov/popest/data/historical/files/MRSF-01-US1.pdf. For population estimates methodology statements, see http://www.census.gov/popest/methodology/index.html. Source: U.S. Census Bureau, 2010-2014 American Community Survey 5-Year Estimates; Population under 18 years in households. 2010-2014 American Community Survey 5-Year Estimates

Notes: Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percen probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error [the lower and upper confidence bounds contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data]. The effect of nonsampling error is not represented in these tables. While the 2010-2014 American Community Survey [ACS] data generally reflect the February 2013 Office of Management and Budget [OMB] definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities reflect the February 2013 Office of Management and Budget [OMB] definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities; Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization. "Supporting documentation on code ists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section; Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section." Although the American Community Survey [ACS] produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties

| MD | 2,407 | 2,201 | 1,617 | 67.2 | 73.5 | 1,090 | 45.3 | 49.6 | Note: Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race [the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race [the race-alone-or-in-combination concept]. Unless labeled "non-Hispanic," the racealone or race-alone-or-in-combination categories can include individuals of Hispanic-origin; A dash '-' represents zero or rounds to zero; The symbol [B] means that the base is less than |  |  |  |  |  |  |  |  |  |

Definitions: Fourth grade public school students who scored below the proficient level in reading, as measured and defined by the National Assessment of Educational Progress [NAEP], by race and Hispanic origin. For a more detailed description of achievement levels see: http://nces.ed.gov/nationsreportcard/Reading/achieveall.asp. Public schools include charter schools and exclude Bureau of Indian Education schools and Department of Defense Education Activity schools. Race categories exclude Hispanic origin. Results are not shown for students whose race or Hispanic origin was not classified.

Notes: For employed women aged 16 and older. This definition of STEM occupation follows the U.S. Bureau of Labor Statistics definition of STEM occupations, which includes the social sciences and manageria occupations in social science fields, but excludes support occupations, health occupations, and most technical and trade occupations that do not require a four-year degree

## APPENDIX D16

Source: Bureau of Labor Statisticc, Current Population Survey. Ranked by: Unemployment Rate
Note: Data for demographic groups are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. Items may not sum to totals because of rounding. Estimates for the race groups shown in the table do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated 2010 census-based population controls. For information on the preliminary nature of these data, see www.bls.gov/lau/pnote14full2015.pdf

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Living Wage | \$10.38 | \$22.67 | \$28.59 | \$37.55 | \$17.47 | \$21.59 | \$24.13 | \$28.18 | \$8.73 | \$12.62 | \$15.64 | \$19.41 |
| Poverty Wage | \$5.00 | \$7.00 | \$10.00 | \$11.00 | \$7.00 | \$10.00 | \$11.00 | \$13.00 | \$3.00 | \$5.00 | \$5.00 | \$6.00 |
| Minimum Wage | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 | \$8.05 |

Source: http://livingwage.mit.edu/states/04; © 2016 Dr. Amy K. Glasmeier and the MA Institute of Technology; The living wage shown is the hourly rate that an individual must earn to support their family, if they are the sole provider and are working full-time [2080 hours per year]. All values are per adult in a family unless otherwise noted. The state minimum wage is the same for all individuals, regardless of how many dependents they may have. The poverty rate is typically quoted as gross annual income. We have converted it to an hourly wage for the sake of comparison; For further detail, please reference the technical documentation here.

| APPENDIX D14 |  |  |
| :---: | :---: | :---: |
| Female Unemployment, U.S. and AZ, 2015 | CIVILIAN N LAB | Stitutional RCE |
| GROUP | U.S. Rate\% | Arizona Rate \% |
